

# Muhammad Uzair Ali

Rawalpindi, Pakistan | m.uzairalics@gmail.com | (+92) 333-5268325 | github.com/M-Uzair-Ali

## Professional Summary

Technically fluent Computer Science undergraduate (CGPA 3.52/4.0) with hands-on experience designing and shipping full-stack and AI-powered products from scratch. Proven ability to define system architecture, prioritize feature scope, and deliver user-centric products end-to-end. Passionate about bridging engineering and business strategy to build impactful, data-driven software. Seeking a software engineering role where I can build scalable, user-centric products at the intersection of backend systems and AI.

## Education

### National University of Modern Languages (NUML)

Rawalpindi, Pakistan

*Bachelor of Science in Computer Science (BSCS) — CGPA: 3.52 / 4.00*

2024 – Present

- Currently in Semester 5; coursework includes Data Structures & Algorithms, Database Design, OOP, and Software Engineering.
- Active member of university tech society; participant in coding competitions and inter-department events.

## Product & Engineering Experience

### HunarAI Career Platform Product Owner & Backend Lead

2024 – Present

*ASP.NET Core 8 · Clean Architecture · JWT · Entity Framework Core · SQL Server · Python · SBERT · Qdrant · GPT-4o · FastAPI*

- **Defined product vision** for an AI-powered career matching platform designed to reduce mis-hiring and improve recruiter efficiency by semantically matching candidates to job listings.
- **Architected a scalable RESTful backend** (JobPortalAPI) following Clean Architecture across 4 layers (Domain, Application, Infrastructure, Presentation), enabling independent iteration on each layer without regressions.
- **Designed core user flows** for three distinct personas Admin, Recruiter, and Candidate and enforced business rules such as duplicate application prevention, listing expiry, and recruiter ownership to protect data integrity.
- **Built AI matching engine** (ResuMatch): designed a RAG pipeline using SBERT sentence embeddings and Qdrant vector DB to achieve semantic resume-job matching beyond keyword search; integrated GPT-4o to generate explainable, structured fit-gap feedback surfaced to candidates.
- **Prioritized authentication security**: implemented stateless JWT with refresh token rotation and BCrypt hashing, reducing account compromise risk from credential exposure.
- Exposed AI matching logic via a FastAPI REST endpoint consumed by the frontend, enabling clean separation of AI and product layers for independent deployment.

### SwiftBuy Full-Stack E-Commerce Product

2024 – Present

*React 19 · Redux Toolkit · Node.js + Express · MongoDB · JWT*

- **Scoped and shipped** a complete e-commerce platform covering product discovery, cart management, checkout, and order placement delivered as a solo PM/engineer within a defined timeline.
- **Identified internationalization as a key growth lever**: designed and implemented 5-language support (English, Urdu, Arabic, French, Chinese) with full RTL layout switching, enabling the product to serve four distinct regional markets out of the box.
- Implemented real-time cart state management with Redux Toolkit (5 actions, 4 selectors), reducing client-server round trips and improving perceived performance.
- Built a responsive dark-theme UI with CSS variables, reducing redesign cost for future theme iterations; actively maintaining new features post-launch.

### Campus Navigation & Room Booking System Product Lead

2024–Present

*C++ · Graph (Adjacency Matrix) · BFS · Linked Lists · OOP*

- **Defined requirements** for a dual-persona product (Visitor and Admin) supporting 12 buildings across 6 categories, balancing navigation accuracy with ease of use.
- Modelled campus as a weighted graph and implemented BFS shortest-path routing, providing users turn-by-turn directions between any two buildings.
- Designed a dynamic booking system using a custom linked-list data structure with add, view, and clear operations; Admin panel supports live graph modification (add/remove edges, register buildings).

## Skills

---

|                 |                                                                                                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Skills  | Product discovery, roadmap definition, user story writing, persona-based design, feature prioritization, MVP scoping, API product design, RAG/AI product integration |
| Technical Depth | ASP.NET Core, Entity Framework Core, React, Node.js + Express, FastAPI, Laravel, REST API design, Clean Architecture, SQL, MongoDB                                   |
| Languages       | C#, JavaScript, Python, Java, C++, PHP, HTML/CSS                                                                                                                     |
| AI / ML Tools   | SBERT, Qdrant vector DB, GPT-4o, RAG pipelines, semantic search                                                                                                      |
| Data & Tooling  | Git, Visual Studio, Redux, SQL Server, MongoDB, REST API design                                                                                                      |
| Soft Skills     | Cross-functional collaboration, stakeholder communication, rapid prototyping, analytical problem solving, quick learner                                              |

## Achievements & Activities

---

- **1st Place Inter-Department Athletics Race:** Demonstrated competitive discipline and resilience under pressure in a university-wide competition.
- Active participant in university tech society and competitive coding events, continuously building problem-solving acuity relevant to product and engineering roles.
- Independently built, deployed, and maintained multiple production-grade projects with zero institutional support demonstrating ownership, initiative, and bias toward action.
